To help Stony Brook Elementary School in Hopewell Township, New Jersey, celebrate 100 Years of Flight on December 17th, Cognetics Corporation Senior Designer Paul S. Hoffman will be donating his services. Paul is an accomplished artist and a member of the Board of Directors of the International Association of Astronomical Artists. He will be spending the day at the school, painting visions of future flights into space. As Paul works on his paintings, he will share with the students his artistic methods and techniques as well as information about space and astronomy.

Paul will also visit the school in the Spring when the 2nd grade students are learning about the Solar System.

After a career as a scenic designer for theatre and television, Paul began authoring graphics software for computers and joined Cognetics, a computer interface design company in Princeton Junction, NJ, in 1985. Since 1997, Paul has focused his spare time activity on creating images related to space and astronomy. He has built interactive computer 3D versions of some of Chesley Bonestell's illustrations of a moon mission, keeps devising new ways to construct images with the computer, and has brought his acrylics and brushes out of retirement. Paul's artwork can be viewed on his web site at <http://www.digitalspaceart.com>.
